## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 7\_Q4

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Maria, a software developer, is working on an inventory management system project using Java that utilizes an inventory interface to manage a store's products.

The interface should define two methods: addProduct, which adds a product by accepting its name, price, and quantity, and calculateTotalValue, which computes the total value of all products in the inventory. Implement the interface in a class called SimpleInventory, which internally manages a list of Product objects.

Each Product object should encapsulate the product's name, price, and quantity and include a method to calculate its value as price × quantity. The system should allow users to dynamically add products to the inventory and calculate the total value of all products stored.

Help Maria achieve the task.

### ***Input Format***

The first line of input consists of an integer to choose one of the following options:

1 - to add a product to the inventory.

2 - to calculate and view the total inventory value.

3 - to exit the program.

For Choice 1 (Add Product):

The next input line is the string representing the product name as a string (single or multi-word, without quotes).

The next line is a double value representing the price as a decimal value

The next line is an integer value representing the quantity as an integer

For Choices 2 and 3, no additional input is required

### ***Output Format***

The output displays the results of the commands as follows:

- For the addProduct command, the program should display "Product added to inventory."
- For choice 2, the program should display "Total inventory value [totalvalue]."  
The total value should be displayed with one decimal place. If there is no product in the inventory, print the total as 0.0.
- For choice 3, the program should exit

If the choice is not 1, 2, or 3, then print "Invalid choice. Please select a valid option (1/2/3).".

Refer to the sample output for the formatting specifications.

### **Sample Test Case**

Input: 1  
Laptop  
800.0  
3  
2  
5  
3

Output: Product added to inventory.

Total inventory value: \$2400.0

Invalid choice. Please select a valid option (1/2/3).

### **Answer**

```
import java.util.Scanner;

interface Inventory {
    void addProduct(String name, double price, int quantity);
    double calculateTotalValue();
}

class Product {
    private String name;
    private double price;
    private int quantity;
    public Product(String name, double price, int quantity) {
        this.name = name;
        this.price = price;
        this.quantity = quantity;
    }
    public double getValue() {
        return price * quantity;
    }
}
class SimpleInventory implements Inventory {
    private java.util.List<Product> products;

    public SimpleInventory(int capacity) {
        products = new java.util.ArrayList<>(capacity);
    }
    public void addProduct(String name, double price, int quantity) {
        products.add(new Product(name, price, quantity));
        System.out.println("Product added to inventory.");
    }
}
```

```
public double calculateTotalValue() {  
    double total = 0.0;  
    for (Product p : products) {  
        total += p.getValue();  
    }  
    return Math.round(total * 10.0) / 10.0;  
}  
}  
  
public class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        Inventory inventory = new SimpleInventory(10);  
        while (true) {  
            int choice = scanner.nextInt();  
            if (choice == 1) {  
                scanner.nextLine();  
                String productName = scanner.nextLine();  
                double price = scanner.nextDouble();  
                int quantity = scanner.nextInt();  
                inventory.addProduct(productName, price, quantity);  
            } else if (choice == 2) {  
                double totalValue = inventory.calculateTotalValue();  
                System.out.println("Total inventory value: $" + totalValue);  
            } else if (choice == 3) {  
                break;  
            } else {  
                System.out.println("Invalid choice. Please select a valid option  
(1/2/3).");  
            }  
            scanner.close();  
        }  
    }  
}
```

**Status :** Correct

**Marks :** 10/10
